EDUCATION

The University of Texas at Austin

Austin, TX

Bachelor of Science in Computer Science — Dell Scholar (full-tuition scholarship recipient)

Aug 2025 – May 2028

Relevant Coursework: Data Structures & Algorithms, Computer Organization & Architecture, Operating Systems, Discrete Math

EXPERIENCE

IBM — Guardium Data Protection

Lowell, MA

Product Manager Intern

June 2026 – Aug 2026

- Led development of release-quality intelligence platform analyzing 1.4k customer escalations across Guardium 12.x releases (12.0–12.2.3) in Jira, enabling Product, Support, and Engineering teams to identify quality risks, prioritize fixes, and replace manual reporting workflows with real-time analytics, integrating AI-powered 5-Whys Root Analysis workflow using watsonx Orchestrate
- Built a Voice-of-Customer analytics solution consolidating customer briefings, RFEs, release notes, and field feedback into a centralized decision-support tool that surfaced recurring customer pain points and roadmap opportunities
- Created a Guardium infrastructure-sizing platform that translated customer deployment requirements into architecture recommendations spanning storage, Kafka clusters, collectors, edge gateways, and long-term retention systems, reducing manual pre-sales planning effort and improving deployment planning for technical sellers and solution architects

ROBIN — Robot Interactive Intelligence Lab

Austin, TX

Undergraduate Researcher & Summer Fellow under Dr. Junhong Xu

Jan 2026 – May 2026

- Cut inference latency $\sim 20\times$ (8–10s to 0.3–0.5s/step) on a DAgger pick-and-place pipeline ($\pi 0.5$ VLA, Kinova arm) by diagnosing Python GIL contention and moving inference to a separate ROS2-bridged process with DINOv2 caching and batched encoding
- Restored real-time GPU inference on a Jetson-deployed $\pi 0.5$ VLA policy by root-causing a CUDA/cuDNN loading conflict that forced CPU fallback, cutting per-step inference from 3–5 min to real-time for live human-in-the-loop rollouts
- Benchmarked 6 vision-language models (GPT-5.5/5.2, Gemini, Claude, Qwen, Gemma) for automated robot failure detection, quantifying model-specific biases and shipping a web app that segments rollout videos by failure timestamp via VLM APIs

Dell Technologies' Excel with Dell Program

Remote

AI Strategist

Feb 2026 – Apr 2026

- Spearheaded product strategy for an enterprise AI sentiment analysis tool, architecting NLP model pipelines (BERT, BERTopic) to solve customer feedback bottlenecks for a top-tier proposal selected among 51 students ($\sim 15\%$ acceptance rate)
- Drove data-informed product decisions by synthesizing 4,132 reviews in Tableau to flag 41 at-risk products, presenting cross-functional financial models that projected a 185.7% Year-1 ROI, \$250K annual labor savings, and 8,800 hours saved
- Validated infrastructure architecture with Dell SMEs, configuring GPU-accelerated compute (PowerEdge R760xa) and storage (PowerScale) to design a 4-quarter SDLC roadmap that reduced decision speeds from multi-day delays to < 1 day

PROJECTS

ReadEasy | SASE Roots Competition

Apr 2026

- Won 1st place at the SASE Roots case competition by pitching a \$0-cost accessibility tool addressing a market of 780M+ people with reading difficulties, backed by a feature-by-feature comparison against current solutions on the market
- Drove competitive positioning by benchmarking the product against Adobe Acrobat, Read&Write, Natural Reader, and 3 others across 6 criteria (OCR, dyslexia fonts, read-aloud, cost, account requirement, bionic reading), surfacing the gap no incumbent filled
- Owned the product end-to-end — from user research on dyslexia accessibility needs through implementation (OCR pipeline, PDF rendering, text-to-speech integration) to the go-to-market pitch — as technical product lead on a 4-person team

Proxi | Texas Convergent

Sept 2025 – Dec 2025

- Spearheaded IoT smart glasses ecosystem to reduce digital eye strain, achieving sub-second alerts and a $> 95\%$ payload reduction by running local YOLO object detection on a Raspberry Pi and transmitting metadata via MQTT
- Architected a multi-tier data pipeline (Flask, Node.js, MongoDB) to process screen-time sessions, launching a cross-platform React Native app that delivered real-time usage analytics and historical health trends directly to users
- Directed product security strategy, achieving zero critical vulnerabilities by conducting network penetration testing (Kali Linux, Wireshark) and applying OSINT capstone research on wearable threat vectors to secure user data

LEADERSHIP & COMMUNITY INVOLVEMENT

Texas ACM | Marketing Junior Officer | Austin, TX

May 2026 – Present

- Managed digital marketing and event outreach across Instagram, Discord, and newsletters to drive UTCS community engagement

UTCS Academy for Women | Resident Assistant | Austin, TX

May 2026 – June 2026

- Mentored high school students in a residential UTCS outreach program promoting women's participation in computer science

MIT BWSI Program for Advanced Cyber Operations | Team Leader | Remote

June 2023 – Jul 2023

- Selected as 1 of 25 students nationwide for a highly competitive cybersecurity program; appointed as 1 of 5 team leaders

Engineering Academy | President, Dir. of Activities | Missouri City, TX

Aug 2021 – May 2025

- Led 350+ student STEM organization; coordinated annual Engineering Career Fair and a \$25,000 fundraising campaign

HONORS & AWARDS

- National Center for Women & Information Technology (NCWIT) Aspirations in Computing — Houston Affiliate Winner
- Pinterest Engage Program — Selected mentee, paired with Pinterest AI Platform engineer
